Zoho Desk & Zoho CRM

COMPANY OVERVIEW

A rapidly growing corporate travel technology provider, offering unified travel booking and expense management for corporate clients, faced challenges scaling its customer servicing and sales efficiency due to increasing demand. As teams expanded, reliance on manual processes hindered their ability to quickly fulfill support needs, resolve travel queries, and manage the sales pipeline effectively, impacting response times and collaboration.

To enhance operational agility and customer experience, the company partnered with AGSuite to implement Zoho CRM and Zoho Desk. Critically, Zoho Desk was integrated with IVR and WhatsApp to ensure seamless, multichannel customer communication, allowing the provider to streamline support and upgrade their overall service delivery.

CHALLENGES FACED WHILE USING LEGACY SYSTEMS

Fragmented Customer Engagement

- Customer inquiries and travel requests were managed manually across multiple channels with no unified tracking.

Limited Visibility on Sales Pipeline

- Sales activities were scattered — making it difficult to forecast revenue, track conversions, or manage approvals.

Response Delays on Support Tickets

- Travel-related queries required urgent attention but lacked proper assignment rules, SLAs, or escalation matrix.

Communication Challenges

- Clients interacted through phone calls, WhatsApp, and emails; without integration, tracking conversation history was difficult.

CHALLENGES FACED WHILE USING LEGACY SYSTEMS

Scaling Limitations

- Support and sales operations needed automation to meet growing customer volume and service expectations.

SOLUTION: ZOHO CRM & ZOHO DESK

AGSuite deployed Zoho solutions to unify customer support and commercial operations:

- **Zoho CRM** centralized lead, account, and opportunity management for better pipeline visibility and accurate sales forecasting.
- **Zoho Desk** established a structured support system with ticket categorization, SLA configuration, and faster resolution cycles.
- **IVR Integration with Zoho Desk** enabled intelligent call routing with automatic ticket creation for quicker assistance.
- **WhatsApp Integration with Zoho Desk** ensured real-time communication and instant updates directly within the support platform, enhancing traveler convenience.

This digital transformation strengthened both client onboarding and travel support processes – ensuring every customer inquiry is tracked, prioritized, and resolved efficiently.

BENEFITS AFTER ZOHO IMPLEMENTATION

Improved Customer Experience

- Automated ticketing, clear SLAs, and faster resolutions helped improve traveler satisfaction.

Streamlined Sales Processes

- Consistent data across CRM enabled enhanced forecasting, increased lead conversions, and stronger pipeline efficiency.

360° Customer Visibility

- All touchpoints – calls, WhatsApp messages, and emails – are now tracked and visible across teams.

Higher Productivity

- Automation reduced manual work for service agents and sales teams, improving response times and operational control.

Future-Ready Platform

- Capability to scale with the evolving needs of enterprise customers and multi-level approval workflows.
